Lab Precision Meets Farm Performance.

Thriver Snap-On Calf Nipple is the latest innovation, developed from Conewango's deep understanding of calf rearing.

Precisely engineered and rigorously tested, the Thriver Snap-On Calf Nipple reduces bloating and scouring to improve nutrient absorption and ensure optimal digestive health. Steady milk flow leads to stress-free calves for dairy operations and calf ranches of all sizes.

Conewango

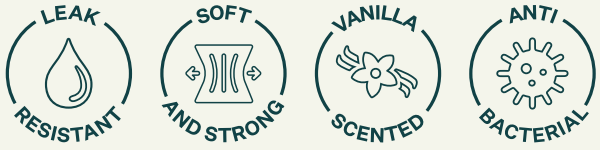

Thriver Snap-On Calf Nipple:

Scientifically Designed. Proven on the Farm.

To learn more about how the Thriver Snap-On Calf Nipple can make a powerful difference in the development of the most valuable generation of your herd, speak with your local Conewango representative.

Innovative Snap-On Rubber Calf Nipple

Improve Digestive Health and Reduce Stress *in a Snap!*

Conewango

Proven Worldwide, now Available in the U.S.A.

Thriver Snap-On Calf Nipple is revolutionizing the way the world feeds calves. Its innovative design is the result of thoughtful engineering, real-world expertise and exhaustive field trials to solve common feeding challenges.

Conewango quality lets you prioritize herd health and efficiency – from day one of your calves' lives.

Innovative slit configuration keeps calves working just hard enough

Designed for high performance with these features:

Product Detail: Top View Drawing

ADVANCED THREE-SLIT DESIGN

Three radial cuts direct milk flow away from the throat, helping calves naturally produce saliva for a healthy pH in the stomach, and reduced choking, indigestion and pneumonia.

REDESIGNED VENT TECHNOLOGY

Unique end geometry and valve structure prevents leaks and eliminates any chance of bottle collapse caused by the vacuum during feeding.

NATURAL CONCAVE SHAPE

Designed to replicate a cow's teat and fit comfortably in a calf's mouth, the super-soft, yet incredibly durable rubber provides comfort and longevity.

ENHANCED ERGONOMICS

Ribbed base allows for improved grip and easier handling.

VANILLA SCENTED

Infused vanilla scent encourages calves to latch on promptly, promoting quicker feeding adaptation.

ISO 22196:2011 99.9% Anti-bacterial compound
